GLOBAL COFFEE PRODUCTION IN 2023

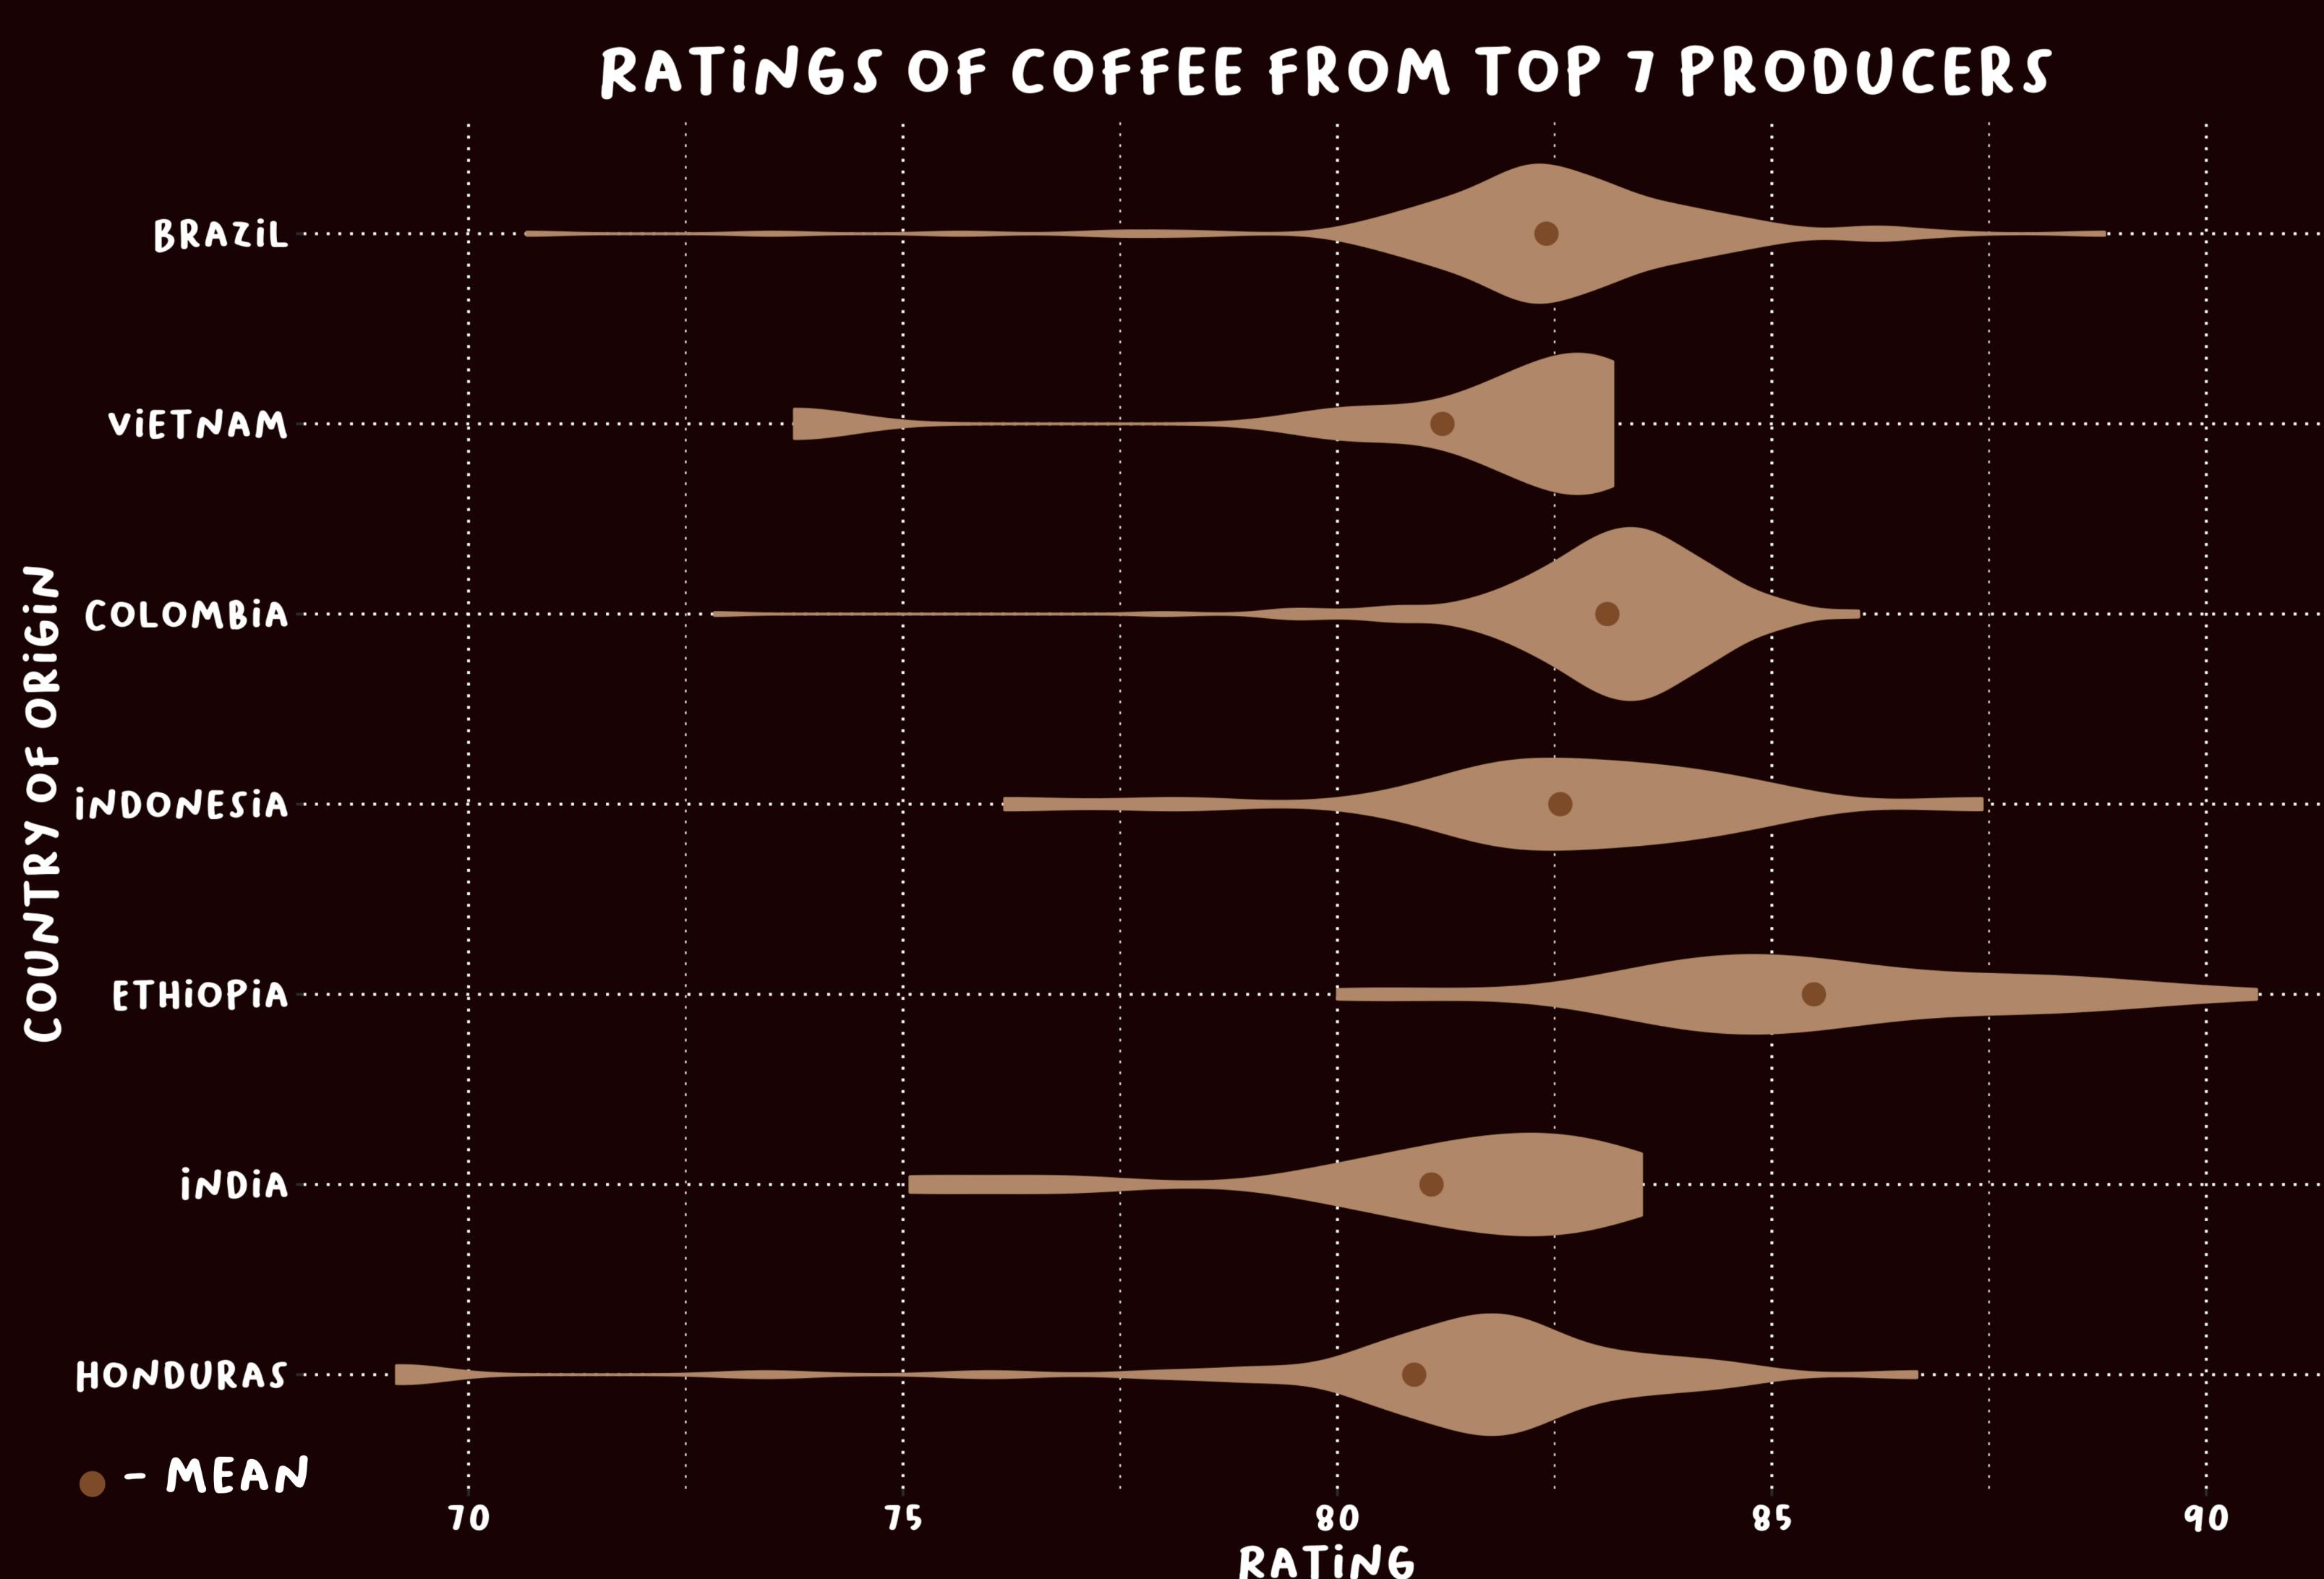

Explore global coffee production in 2023 with a map showcasing the pound output across 48 countries. Brazil, the largest coffee producer, dominates the global market with an impressive output of 5.7 billion pounds. Vietnam closely follows, producing 3.6 billion pounds, highlighting the significant gap between these leaders and other coffee-producing nations. Ethiopia, recognized as the birthplace of coffee, maintains a notable share in global production.

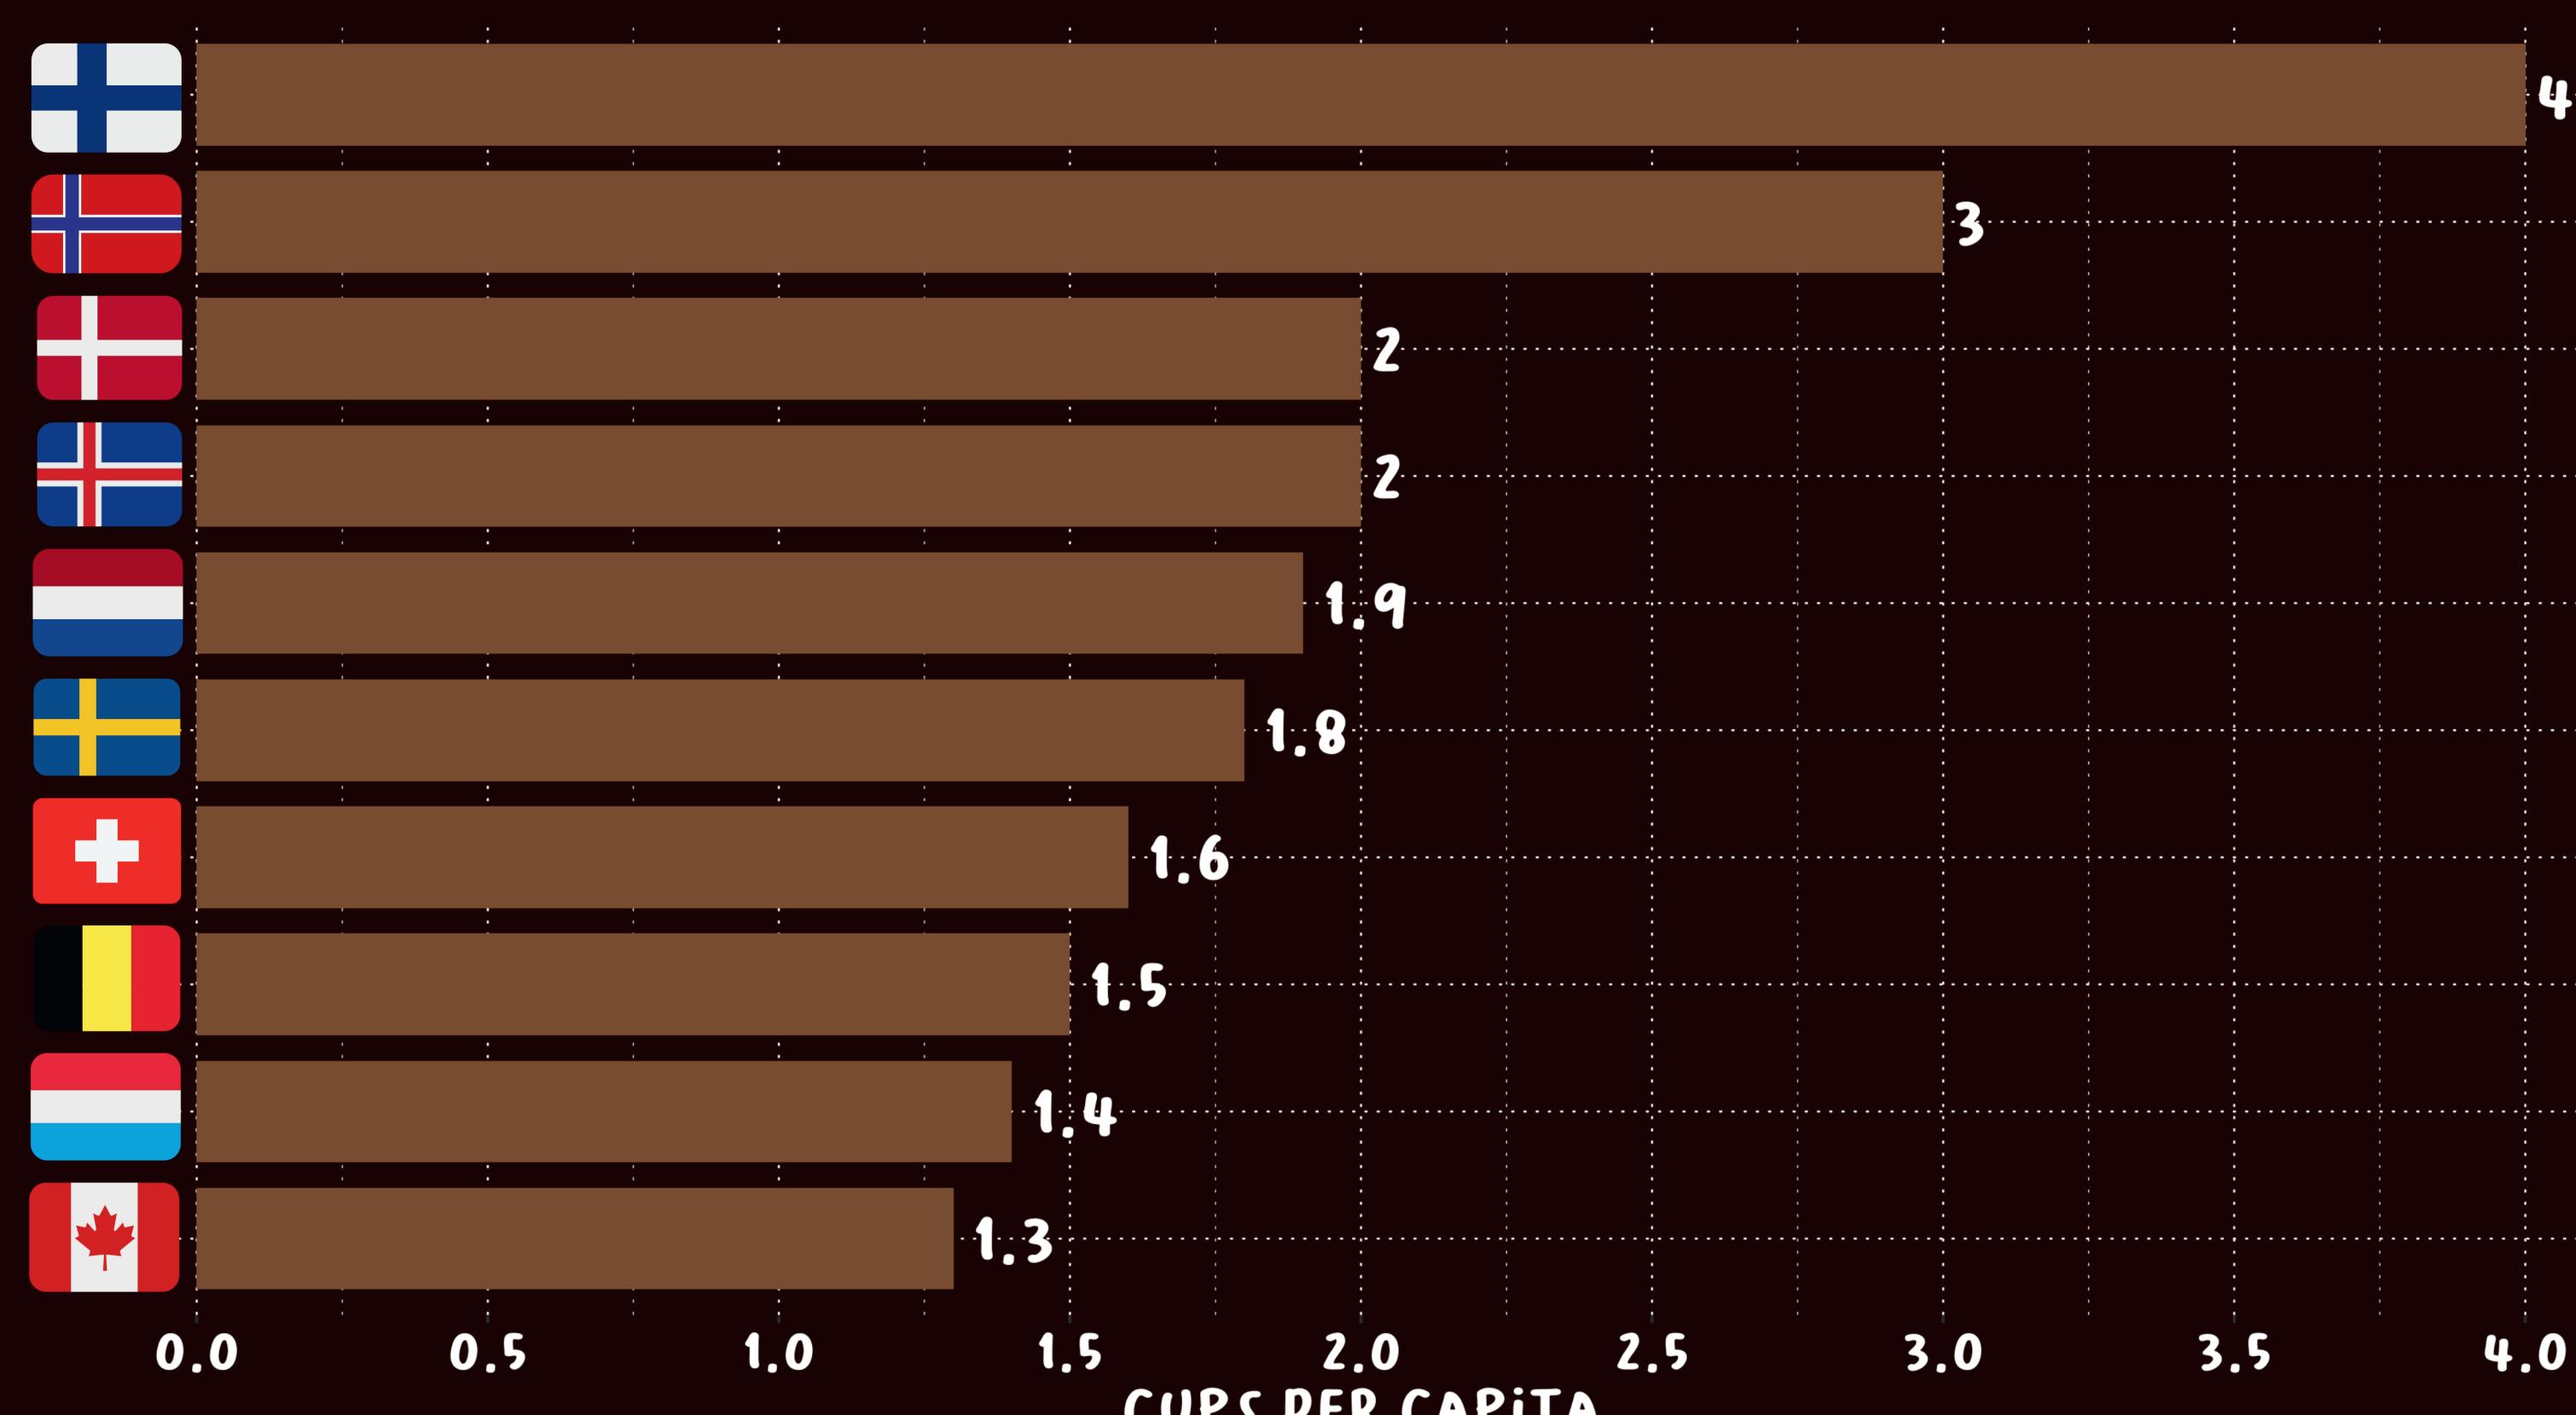

DID YOU KNOW?
Coffee beans are actually seeds. They're the pits of cherry-like berries

This violin plot offers an intriguing glimpse into the diverse landscape of coffee quality across the top 7 coffee-producing countries. The width of each violin represents the density of ratings for coffee from that particular country.

On average, Ethiopia (the 5th largest producer) appears to produce the highest-rated coffee, followed by Colombia in second place and Indonesia closely ranking third.

10 COUNTRIES WITH LARGEST DAILY COFFEE CONSUMPTION

When exploring the world of coffee consumption, the familiar names of Italy or France might come to mind. However, a deeper dive into the data reveals a surprising trend.

As we can observe, the Nordic countries take the lead on the global stage in terms of daily coffee consumption, joined by The Netherlands, Switzerland, Belgium, Luxembourg and Canada. The colder climates of most of these nations, particularly in Finland and Norway, seem to play a pivotal role, sparking a shared appreciation for coffee.

DID YOU KNOW?
In Finland it is mandatory by law, to have at least two 10-15 minute coffee breaks at work, every day.
